As members of the Global One Health Index team of 38 researchers and an expert advisory committee, we have developed a framework for assessing One Health performance in guiding policymaking in local settings. We used the index to assess the One Health approach of more than 200 countries and territories to zoonotic-disease control, food security, climate-change mitigation and antimicrobial resistance (see X.-X. Zhang et al. Preprint at <https://doi.org/hq75>; 2022).

As well as helping to advance general understanding of the determinants and functions of a One Health approach, the results will enable the formulation of a realistic plan for implementing the principles globally and for promoting capacity building where it is needed.
