Ludwig et al., Fig. 2
B. Comparison of investigation duration between aCSF and Vasopressin treatment groups. The bar graph shows the investigation duration (s) for different treatment conditions. The asterisk (*) indicates a significant difference (P<0.01) between groups.

C. Percentage of time spent by juveniles in the open and closed sections of the testing apparatus. The bar graph illustrates the percentage of time spent in each section with statistical significance indicated.

D. Duration and number of events recorded in different parts of the testing apparatus. The bar graphs display the duration (s) and number of events with associated p-values for statistical analysis.
