## Corrigendum

## Corrigendum to “Thermodynamic modelling of alkali-activated slag-based cements” [Appl. Geochem. 61 (2015) 233–247]

Rupert J. Myers <sup>a, b</sup>, Barbara Lothenbach <sup>c</sup>, Susan A. Bernal <sup>a</sup>, John L. Provis <sup>a, \*</sup><sup>a</sup> Department of Materials Science and Engineering, The University of Sheffield, Sir Robert Hadfield Building, Mappin St, Sheffield S1 3JD, UK<sup>b</sup> Department of Civil and Environmental Engineering, The University of California, Berkeley, CA, United States<sup>c</sup> Laboratory for Concrete and Construction Chemistry, EMPA, Dübendorf, 8600, Switzerland

The authors regret that the ratio  $10(\text{Na}_{\text{C-(N-)A-S-H}}/\text{Na}_{(\text{aq})})$  plotted in Fig. 6B in the original submission was calculated incorrectly; as a result, the plotted result in that paper is erroneous. These calculations have been corrected and the ratio replotted as  $0.1(\text{Na}_{\text{C-(N-)A-S-H}}/\text{Na}_{(\text{aq})})$  in Fig. 1.

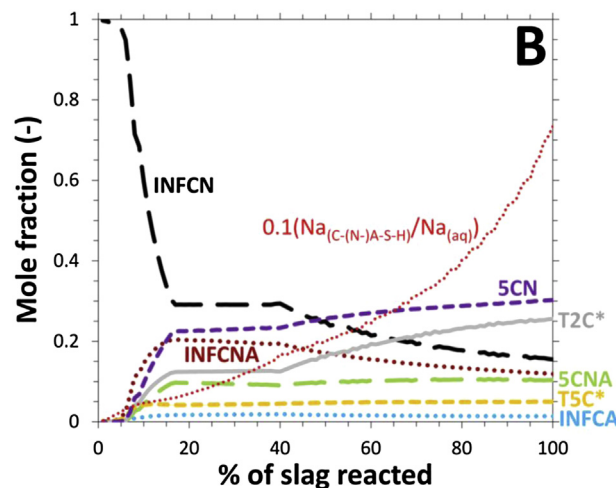

Fig. 1. Replot of Fig. 6B in the original paper (Myers et al., 2015) after correcting the calculation for the  $\text{Na}_{\text{C-(N-)A-S-H}}/\text{Na}_{(\text{aq})}$  ratio.

This change affects the following sentence on page 241 of the original paper (Myers et al., 2015): “A 50% reduction in the concentration of Na in the pore solution is predicted from 0% to 100% slag reaction extent, although a constant pH of 14 is maintained and >10 times more Na is always predicted to be present in the aqueous phase relative to C-(N-)A-S-H gel”, which refers to the original, erroneous Fig. 6B. The quoted text should be changed to the following description of Figs. 1 and 6A in the original paper: “A 50% reduction in the concentration of Na in the pore solution is predicted from 0% to 100% slag reaction extent, although a constant pH of 14 is maintained. More Na is predicted to be in the C-(N-)A-S-H gel at slag reaction extents  $\geq 28\%$ .”

This correction does not affect any other part of the original paper.

The authors apologise for any inconvenience that this has caused.

## Acknowledgements

The authors thank Mr. Yibing Zuo (Delft University of Technology) for making us aware of the error.
